ONE-PAGER	**0.1**	**WHITEPAPER**	**GENESIS TESTNET**

Elyra is an experimental protocol under active development. This document may evolve as research and development progress and does not constitute financial, legal or investment advice.

Elyra — One-Pager

The network, the token path, and the roadmap, at a glance.

What Is Elyra?

Elyra is an AI-native execution network: an EVM-compatible Layer 1 blockchain designed to progressively add protocol-native infrastructure for autonomous AI agents — persistent identity, programmable wallets, a runtime, and execution memory. The network launches as a standard EVM-compatible chain and evolves toward agent infrastructure in later phases; it does not launch with it already built.

CURRENT PHASE

Genesis — the Genesis Testnet (EVM-compatible chain, block explorer, RPC endpoint and faucet) opens to the public before the token launch. No live token, no bridge, no mainnet yet.

The Token Path

Public Presale (fixed price) → Ethereum Launch (ERC-20) → Genesis & Testnet → Mainnet Activation → Bridge · 1:1 Migration → Native ELY

ELY launches as an ERC-20 token on Ethereum after a single public presale at a fixed $0.001333 — no private sale, no VC allocation. At Mainnet activation, holders migrate 1:1 through an official bridge to native ELY, the chain's gas, staking and governance asset. No dilution, no re-allocation.

Supply Distribution

ALLOCATION	%	LOCK / RELEASE
Public Presale	15%	Fully unlocked at launch; unsold burned
Liquidity & Market Making	15%	Up to 3% on Uniswap at launch (LP locked 12 months); rest added over time; multisig
Genesis Airdrop · Season 1	4%	35% at launch, rest over 11 months
Creators & KOL (Elyra Voices)	4%	35% at launch, rest over 11 months
Ecosystem & Grants	22%	6-month lock, then 24 months linear; multisig
Validator Rewards	20%	Emitted only after Mainnet
Treasury & Operations	10%	6-month lock, then 24 months linear; multisig
Team & Core Contributors	10%	12-month lock, then 24 months linear

Total supply 1,000,000,000 ELY. About 21% circulates at launch: the presale (no vesting), the Uniswap pool and 35% of community and creator rewards. 20% of presale proceeds funds locked Uniswap liquidity; the rest funds development, audits, operations and marketing, reported quarterly. The token and vesting contracts and an independent third-party audit are published publicly, days before launch.

Roadmap

Genesis Network → Ecosystem Expansion → AI-Native Infrastructure → Mainnet / Autonomous Economy

Why It Matters

- Deterministic settlement
- Explicit permissions
- Verifiable execution
- On-chain vesting schedules
- One public price, no VC allocation
